The steps to run our code:

1- Install MySQL server, and then run the script file that contain the data base structure. (To run script: file → open script file→ then choose the directory which contain the script file).

2- Install eclipse , then choose open projects from file system → press on Directory → select the project which name **gp_project .**
   (run project through choose run from above tool bar).

3- Install android , then choose file →open file →choose project with name **GP_Cashiery .**
   (to run project choose run from file, but before run android-→ should run project "**gp_project** "on eclipse and open MySQL server , to run project should be connect android phone with USB "to using camera of phone to scan").
